

PROJECT MANAGEMENT HEALTH CHECK>>

Measured Success

The **Project Management Health Check** is an effective method of reviewing your organisations capability of managing projects and change.

Maybe these are familiar in your business:

- Projects not delivering expected results (over budget, late or out of scope)
- No transparency over the changes in the organisation
- Lack of communication and ownership for projects
- Projects not aligned to business objectives or reviewed if still relevant to now
- Key resources are pulled across too many projects

If so, then it may be time to review your Project Management methods and highlight weaknesses and opportunities to help deliver more successful projects and change programmes.

The **Project Management Health Check** covers the following areas of Project Management in your business:

- Strategy / Programme Management
- Framework / Methodology
- Ownership / Roles & Responsibilities
- Stakeholders / Communications
- Business Case / Scoping
- Resource Management
- Cost Management
- Scheduling / Time Management
- Training / Support
- Change Management

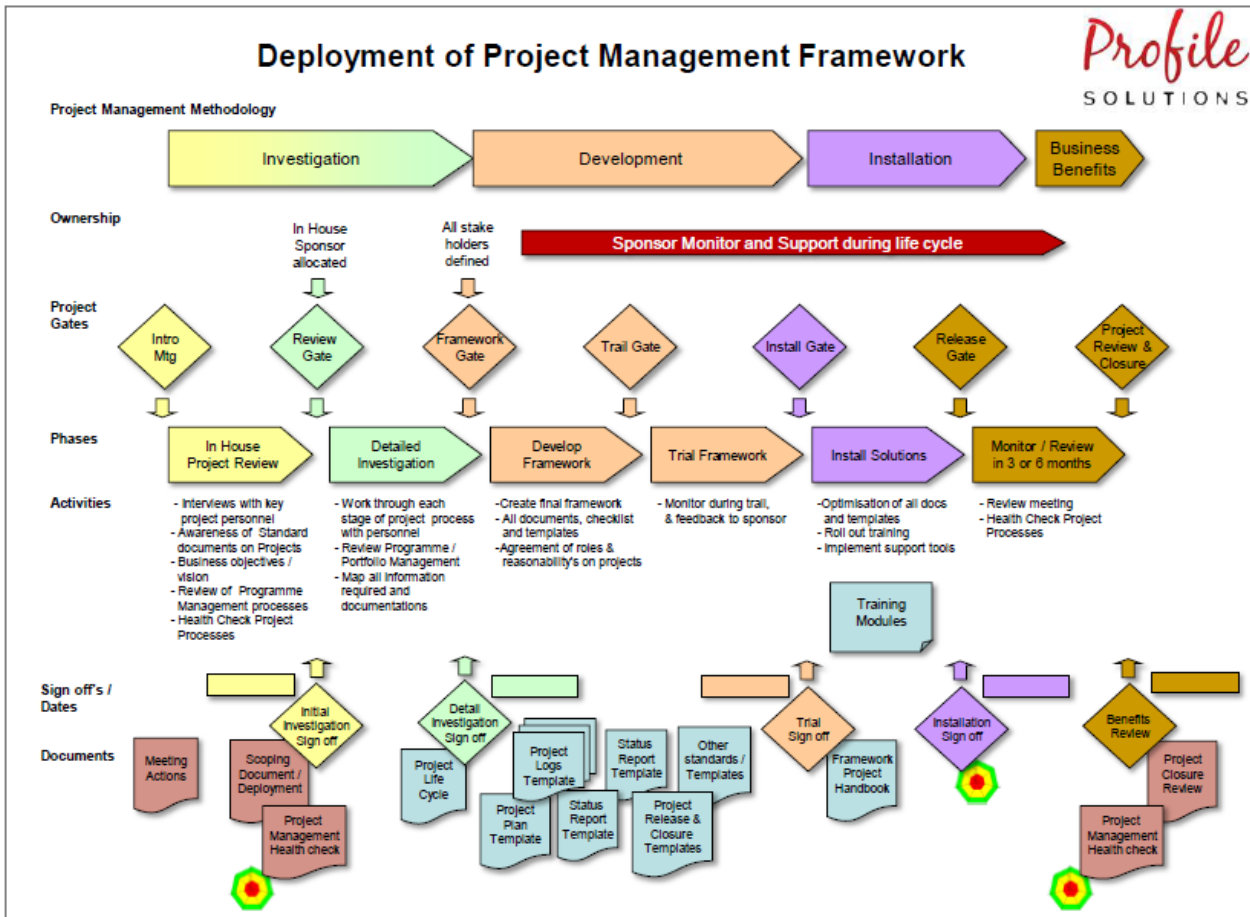

It is just as important to have Project Management best practices in place for smaller businesses as it is for larger organisations, as the principles are much the same.

Take a few minutes today and have a run through this **FREE Project Management Health Check** and see the results on the radar diagram. Simply score each of the statements between -4 (do not agree/don't do) to 4 (total agree/used on all projects).

"If you don't know where you are going, any road will take you there."
